ION GTP Advanced Execution Tools

Automate your order execution across markets

To achieve best execution, you need to place orders efficiently without moving the market. In today's increasingly electronic environment, you cannot rely on manual processes. You need advanced tools to automate your order execution across global exchanges on a vast range of products with differing liquidity levels.

Do everything you need in one platform

- Execute all your orders from a single centralized platform.
- Maximize performance with co-located algo and spread trading engines.
- Drive your algos using global historical and real-time market data from the ION TickerPlant.
- Access algos on-screen, or via FIX or API.

Automate your execution workflow

- Use the *hawkeye* order type to trigger an order in any market based on one or more events.
- Trade with tick discretion and aggress the market when liquidity changes.
- Create advanced contingent orders like one-cancels-other and one-then-other.
- Time-slice an order according to a customized schedule.

Achieve best execution

- Trade at a constant percentage of market volumes using the VWAP algo or at a pre-defined percentage of market volumes using POV and POV axis.
- Minimize risk-adjusted slippage against the arrival price using the Implementation Shortfall algo, or against the close price using MOC.

Track your order performance

- Measure your order performance against common benchmarks and generate automated reports.
- Compare passive and aggressive execution and analyze your spread capture.
- View and sort by key performance metrics alongside your orders.

Execute orders any way you choose
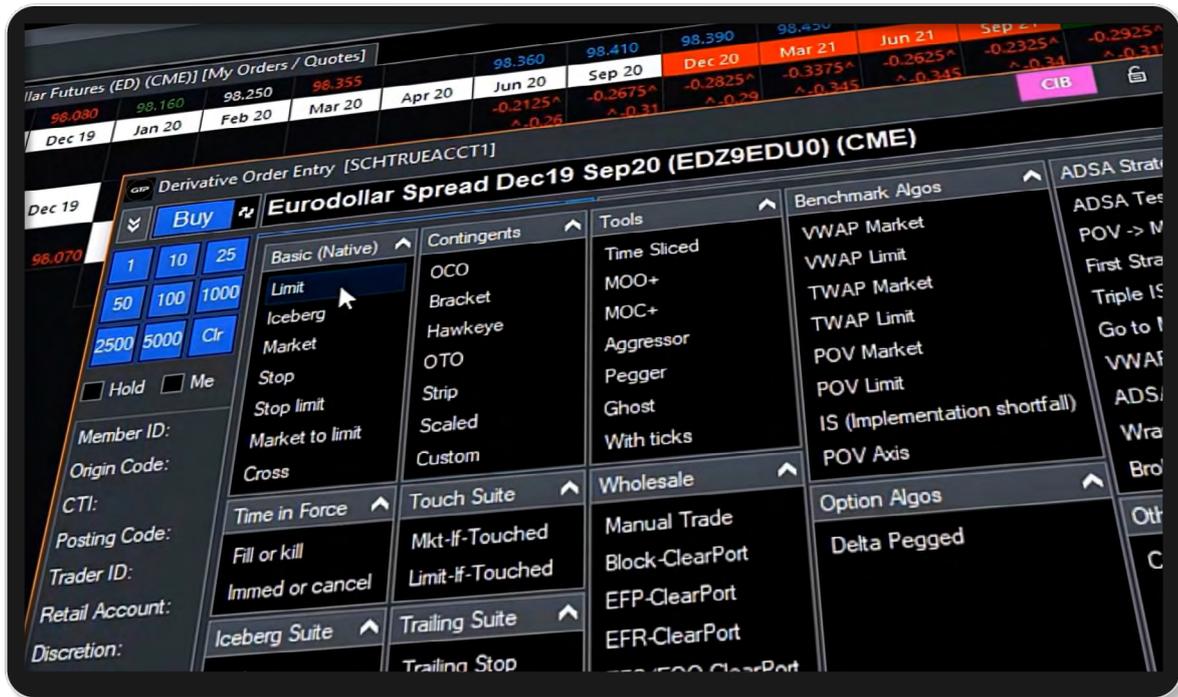

With ION GTP's Advanced Execution tools, you can automate the most complex execution strategies with a suite of co-located algorithms integrated with your OMS. You can easily execute all types of advanced orders. And you can track the performance of your order post-trade and in real time to measure your performance against industry benchmarks.

Automation

Trading optimization based on real time and historical data.

Integration with order management, pre-trade risk checks, and order analytics.

Innovation

Native order types enhanced with flexible parameters.

Algos designed and performance tested using a quantitative, data-driven approach.

Collaboration

Easy integration of proprietary and third-party algos.

Solutions created in long-term partnerships with Tier 1 FCMs.

ION MARKETS

Our cleared derivatives solutions automate your complete trade lifecycle and deliver actionable insights, whenever and wherever you need them.
